

Initial State: Full Gauge Symmetry $\mathcal{G}$

K
(Parallel Key: Gauge
Symmetric)

Ω
(Connection: Gauge
Covariant)

$\mathcal{D}(K)=0$
(Weak Deconstruction)

Tension Accumulation Phase

Accumulation of Internal
Tension $A(t)$

Increase of Commutator

Non-commutativity of
Constructive and
Destructive Terms

* Gauge action and time
evolution become non-
commutative

Gauge Breaking at t_{SB}

$\mathcal{G} \rightarrow \mathcal{G}_{broken}$
(Degeneracy of Gauge
Symmetry)

Specific Eigen-direction
Stabilized

Other Directions
Destabilized/Degenerated

Post-Breaking Reconstruction Phase

K^*
(Fixed to New Conceptual
Coordinates)

Stable Solution under
 $\mathcal{G}_{broken}$

Reconstruction: $\mathcal{G}_{broken}$
 $\rightarrow \mathcal{G}_{reconstructed}$
